POSTER TYPES

Your abstract content and word limits are determined by the type of poster selected. Residents, fellows, and students have four poster type options. Poster abstracts are classified as one the following:

- **Case Report:** Authors may select case report submission type to describe an unusual patient-specific case that was not part of a study, but the findings are of interest to healthcare professionals. Case reports will not have a purpose, methods, results, or conclusion in the abstract.
- **Descriptive Report:** Authors may select descriptive report submission type if describing a project, service, or program that would not be considered a research study. Descriptive reports must contain a purpose, methods, results, and conclusion.
- **Evaluative Study Report:** Authors may select evaluative study submission type for reporting on their original research, including clinical research studies, drug-use evaluations, and evaluations of pharmacy services. Evaluative study reports must contain a purpose, methods, results, and conclusion. In addition, the abstract must include scientific results and/or data to support the conclusions. When applicable, the abstract must indicate that the clinical research was approved by the appropriate ethics committee or institutional review board (IRB), and if appropriate, informed consent was obtained for all subjects. If IRB approval was deemed not necessary, there should be a statement that approval was not required.
- **Research-in-Progress:** All submitters/primary presenters—Resident, Fellow, and Student—may select the research-in-progress submission type if you only have a purpose and methods in your abstract. Research-in-Progress abstracts describe projects or clinical studies that are being planned. Results or preliminary results can be presented on your poster at the meeting. Your poster presentation is an ideal time for you to ask questions or get feedback from others on your project/clinical study still in progress.
